## You Didn't Think You Could Do It, Did You?

To most people in the North, Gardenias and Figs are grown in warm climates only, or in greenhouses. But, with only a little extra care, you can grow either of them. We have them for you, and below are instructions for handling.

## Wonderfully Fragrant Gardenias

We supply Gardenia plants out of 2½ or 3-inch pots; you then grow them outside in a sunken flower pot, or coffee can until fall. (If grown in coffee can, punch holes in bottom.) Then bring them in, set them in a sunny window, and water well. They usually start blooming in February, and continue until late spring. They do require an acid soil, and we supply a package of ferrous sulphate with each plant, with directions for acidifying.

PRICES	
2½-Inch Size	3-Inch Size
1 for \$1.00	1 for \$1.35
2 for 1.62	2 for 2.19
3 for 2.25	3 for 3.04
4 for 2.87	4 for 3.88

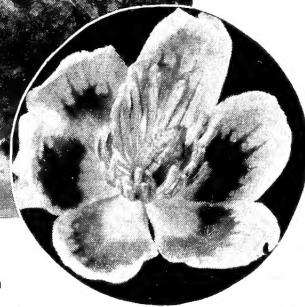

## Figs

It's not at all difficult to grow your own Figs. Simply plant in a tub or pail, as shown above, and sink the whole thing in the ground for outdoor growing from spring to fall. In the fall, bring the whole tree inside. South of Cincinnati, you can plant the Figs in the ground and leave out all winter. Tops may possibly freeze, but new tops come up the next year.

These Fig trees will bear the first year, and each year after that. The fruit is sweet and delicious, with firm, meaty flesh. Excellent for making preserves, jams, canning, drying, or fresh from the tree.
